## FOUND AND FIXED

|                                                             |              |
|-------------------------------------------------------------|--------------|
| Waiver form hid every server error, told guests to retry    | critical     |
| Guest name and phone leaked into the URL before page load   | critical     |
| Signup and login dead, raw page exposed an internal setting | critical     |
| Delete team destroyed archived waivers, said it was empty   | critical     |
| Any staff member could permanently delete signed waivers    | permissions  |
| Rate limit counted typos, could lock out a whole group      | reliability  |
| Signatures too small to read, no way to open them           | usability    |
| Dashboard dates used server time, not Oregon time           | data         |
| Duplicate team hint suggested the number that just failed   | usability    |
| Saving a signature said Saved, then said you had none       | usability    |
| Activity log repeated one image, half the page weight       | performance  |
| Signed in customers were still shown Login and Sign Up      | usability    |
| Delete buttons only 16px tall on a phone                    | touch target |
| Agree checkbox 13px, inputs caused iPhone zoom              | touch target |

## MEASURED IMPROVEMENTS

|                                     |                       |
|-------------------------------------|-----------------------|
| Dashboard page weight               | 216 KB to 124 KB      |
| Duplicate signature copies per page | 9 to 0                |
| Signature viewing size              | 96px to 560px wide    |
| Failed submissions before logout    | 20 to 60              |
| Agree checkbox                      | 13px to 24px          |
| Delete and Clear buttons            | 16px to 44px          |
| Form inputs on phone                | 14px to 16px, no zoom |

## WHAT CHANGED

- Guest waiver form, signature pad, admin signature form
- Waiver dashboard, staff page, footer bar
- Waiver, booking, delete, customer login and signup routes
- Rate limiting, customer sessions, lint config
- New: shared date formatting, admin signature endpoint

## VERIFICATION

---

Type check, lint and production build all pass  
19 routes correct, zero broken links or images  
Every waiver error path retested end to end  
Admin access blocked on all 13 protected routes  
Checked on phone, tablet and desktop widths

## NEEDS YOUR ACTION

---

Set CUSTOMER\_SESSION\_SECRET in Vercel before launch

Accounts stay switched off in production until this is set.

Fill in the master username and password in the handover PDF

Both boxes on page 4 are currently blank.
